

Very Low Energy Diets vs Formulated Meal Replacements

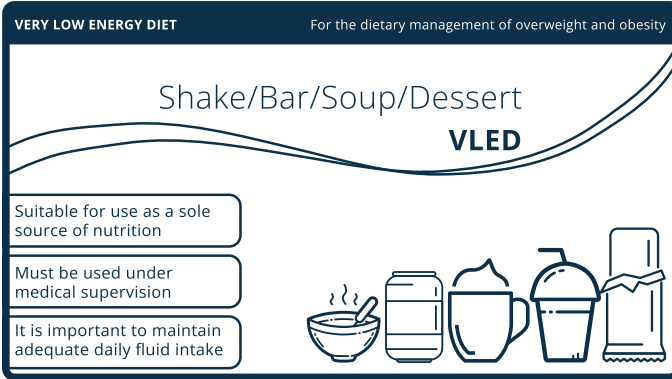

What's the difference?

Very Low Energy Diets (VLED) and Formulated Meal Replacements (FMR) look similar and are often sold side-by-side in pharmacies.

While both products assist with weight loss, have similar packaging, branding and product types (e.g. shakes, soups, bars) their purposes are not the same. Learn what the key differences are and how you can identify a VLED from a FMR.

Very Low Energy Diet (VLED)

Formulated Meal Replacement (FMR)

Labelling

Look for products labelled as *Very Low Energy Diet*.

Look for products labelled as *Formulated Meal Replacement*.

Sale

VLED can only be purchased from places such as a medical practitioner, dietitian or pharmacy.

FMR are available for purchase at places such as supermarkets, pharmacies and department stores.

Use

VLED are products labelled as *Very Low Energy Diet*. They can be used to replace the three main meals you would normally eat in a day. These products are used under **medical supervision** for the dietary management of overweight and obesity.

FMR can be used as a replacement for some of your meals, but they should not replace all the meals you would normally eat.

VLED are **not** recommended for pregnant, nursing, or lactating women or use by infants, children, adolescents and elderly, other than under medical supervision.

While on VLED, it is vital to maintain adequate daily fluid intake.

Nutrition

VLED are required to contain (based on an average of three VLED per day):

- an energy range of 627 – 1115 kJ per serve
- no less than 16.7 g protein per serve
- no less than 16.7 g carbohydrate per serve.

FMR are required to contain:

- no less than 850 kJ per serve
- no less than 12 g protein per serve.

If you are considering the use of a Very Low Energy Diet, please consult a healthcare professional.
