

14 February 2025

329-25

Approval report – Application A1299

Fructosyltransferase from *Aspergillus oryzae* as a processing aid

Food Standards Australia New Zealand (FSANZ) has assessed an application made by Tate and Lyle Solutions USA LLC to amend the Australia New Zealand Food Standards Code to permit the use of an immobilised fructosyltransferase (EC 2.4.1.9) from a non-genetically engineered strain of *Aspergillus oryzae* as a processing aid in the manufacture of short-chain fructooligosaccharides (sc-FOS) from sucrose.

On 7 November 2024 FSANZ sought submissions on a draft variation and published an associated report. FSANZ received one submission.

FSANZ approved the draft variation on 5 February 2025. The Food Ministers' Meeting¹ was notified of FSANZ's decision on 14 February 2025.

This Report is provided pursuant to paragraph 33(1)(b) of the *Food Standards Australia New Zealand Act 1991* (the FSANZ Act).

¹ Formerly referred to as the Australia and New Zealand Ministerial Forum on Food Regulation

SD Risk and technical assessment

Executive summary

Tate and Lyle Solutions USA LLC has applied to Food Standards Australia New Zealand (FSANZ) to amend the Australia New Zealand Food Standards Code (the Code) to permit the use of an immobilised fructosyltransferase from a non-genetically engineered strain of *Aspergillus oryzae* as a processing aid in the manufacture of short-chain fructooligosaccharides from sucrose.

FSANZ has undertaken an assessment to determine whether the enzyme achieves its technological purpose in the quantity and form proposed, and to evaluate public health and safety concerns that may arise from the proposed use of this enzyme.

The proposed use of immobilised fructosyltransferase is technologically justified in the quantity and form proposed during the manufacture of short-chain fructooligosaccharides from sucrose. The enzyme does not perform a technological function in the food for sale, therefore functioning as a processing aid for the purposes of the Code. There are relevant identity and purity specifications for the enzyme in the Code.

No public health and safety concerns were identified in the assessment of the immobilised fructosyltransferase (EC 2.4.1.9) produced by *A. oryzae* under the proposed use conditions.

Short-chain fructooligosaccharides produced from glucose may be used as an ingredient in processed foods such as dairy products, baked goods, and beverages. These uses would require separate approval if not already permitted in the Code.

Following assessment and the preparation of the draft variation, FSANZ called for submissions regarding the draft variation. FSANZ received one submission, which supported the draft variation.

Based on the information provided above and for reasons outlined in this report, FSANZ has approved the draft variation proposed at the call for submissions with a minor amendment to correct a formatting error.

This approved draft variation will amend the table in subsection S18—9(3) of the Code by including this enzyme and its technological purpose in that table. The table lists substances, including enzymes, that are permitted as processing aids for specific technological purposes.

The effect of the approved draft variation will be to permit the proposed use of immobilised fructosyltransferase as a processing aid in accordance with the Code. This permission will be subject to the condition that the enzyme's maximum permitted level or amount in food must be an amount consistent with Good Manufacturing Practice.

1. Introduction

1.1 The applicant

The applicant is Tate and Lyle Solutions USA LLC (Tate and Lyle), a manufacturer of food ingredients.

1.2 The application

The purpose of the application was to amend the Australia New Zealand Food Standards Code (the Code) to permit the use of an immobilised fructosyltransferase (EC 2.4.1.9) sourced from non-genetically modified *Aspergillus oryzae* as a processing aid.

The enzyme preparation is intended to be used as a processing aid in the manufacture of short-chain fructooligosaccharides (sc-FOS) from sucrose.

Sc-FOS can be used as low-calorie sweeteners and dietary fibres to enhance taste and texture. Sc-FOS may be added as an ingredient in processed foods including dairy products, baked goods, beverages, and dietary supplements. Any uses of sc-FOS would require separate approval if not already permitted by the Code.

The applicant has indicated that the enzyme is to be used at minimum levels necessary to achieve the desired effect, in accordance with Good Manufacturing Practice (GMP).

1.3 The current Standard

Australian and New Zealand food laws require food for sale to comply with relevant requirements in the Code. The requirements relevant to this application are summarised below.

1.3.1 Permitted use

Paragraph 1.1.1—10(6)(c) provides that a food for sale must not have, as an ingredient or a component, a substance that is used as a processing aid unless that substance's use as a processing aid is expressly permitted by the Code. Section 1.1.2—13 provides that a substance 'used as a processing aid' in relation to a food is a substance used during processing that meets all the following conditions:

- it is used to perform a technological purpose during processing
- it does not perform a technological purpose in the food for sale
- it is a substance listed in Schedule 18 or identified in section S16—2 as an additive permitted at GMP.

Standard 1.3.3 and Schedule 18 list the permitted processing aids. Enzymes of microbial origin permitted to be used as processing aids are listed in the table to subsection S18—4(5) or in the table to subsection S18—9(3), depending on whether a technological purpose has been specified.

Enzymes of microbial origin listed in the table to subsection S18—4(5) are permitted for use as a processing aid to perform any technological purpose if the enzyme is derived from the corresponding source specified in the table. The table to subsection S18—9(3) lists those substances, including enzymes derived from microbial sources, which are permitted to be used as processing aids for specific technological purposes in relation to:

- if a food is specified—that food; or
- if no food is specified—any food.

Additionally, paragraph 1.3.3—11(c) specifies that the substance may only be used as a processing aid if it is not present in the food at a level greater than the maximum permitted level for that substance indicated in the table to section S18—9.

Fructosyltransferase (including the immobilised form) from *A. oryzae* is not listed in Schedule 18. Therefore, immobilised fructosyltransferase from *A. oryzae* is not currently permitted for use as a processing aid by the Code.

1.3.2 Identity and purity requirements

Paragraph 1.1.1—15(1)(b) requires substances used as processing aids in food to comply with any relevant identity and purity specifications listed in Schedule 3 of the Code when added to food in accordance with this Code or sold for use in food.

Subsection S3—2(1) incorporates by reference the specifications listed in the Joint FAO/WHO Expert Committee on Food Additives (JECFA) Combined Compendium of Food Additive Specifications (FAO JECFA Monographs 26 (2021)), and the United States Pharmacopeial Convention (2022) Food chemicals codex (13th edition). These include general specifications for enzyme preparations used in food processing for identity and purity parameters.

1.3.3 Labelling requirements

Subsection 1.1.1—10(8) provides that food for sale must comply with all relevant labelling requirements in the Code.

Paragraphs 1.2.4—3(2)(d) and (e) exempt processing aids from the requirement to be declared in the statement of ingredients unless other requirements apply.

1.4 International standards

In developing food regulatory measures, Food Standards Australia New Zealand (FSANZ) must have regard to the promotion of consistency between domestic and international food standards.

In terms of food safety, the relevant international standard setting body is the Codex Alimentarius Commission (Codex). In contrast to food additives, there is no Codex 'general standard' for enzymes, however as noted in section 1.3.2 above, there are internationally recognised specifications for enzyme preparations established by JECFA and Food Chemicals Codex.

In addition, there is a Codex guideline - Guidelines on Substances used as Processing Aids (CAC/GL 75-2010) - which sets out general principles for the safe use of substances used as processing aids, including that substances used as processing aids shall be used under conditions of GMP.

1.5 Reasons for accepting application

The application was accepted for assessment because:

- it complied with the procedural requirements under subsection 22(2) of the *Food Standards Australia New Zealand Act 1991* (FSANZ Act), and
- it related to a matter that warranted the variation of a food regulatory measure.

1.6 Procedure for assessment

The application was assessed under the General Procedure in the FSANZ Act.

1.7 Decision

For the reasons outlined in this report, FSANZ decided to approve a draft variation amending the Code to permit the use of an immobilised fructosyltransferase (EC 2.4.1.9) from a strain of *A. oryzae* as a processing aid in the manufacture of sc-FOS from sucrose.

The draft variation proposed at the call for submissions was approved with a minor amendment to correct a formatting error in the name of the instrument. The approved draft variation takes effect on gazettal and is at Attachment A.

The related explanatory statement is at Attachment B. An explanatory statement is required to accompany an instrument if it is lodged on the Federal Register of Legislation.

2 Summary of the findings

2.1 Summary of issues raised in submissions

FSANZ sought comments on the draft variation to the Code included in the call for submissions report between 7 November and 5 December 2024. One submission was received during that period, from New Zealand Food Safety. The submission supported the draft variation.

2.2 Food technology assessment

FSANZ undertook a food technology assessment to determine whether this immobilised fructosyltransferase (EC 2.4.1.9) achieves its technological purpose in the quantity and form proposed. The enzyme is used to produce sc-FOS from sucrose, the first step being a hydrolytic mechanism that splits the sucrose and then a fructosyl transfer mechanism to initiate production and elongation of sc-FOS molecules (see Supporting Document).

The proposed use of the enzyme as a processing aid in the quantity and form proposed is consistent with its typical function described above. The enzyme performs its technological purpose during the manufacture of sc-FOS from sucrose and is not performing a technological purpose in the food for sale. It is therefore functioning as a processing aid for the purposes of the Code.

2.3 Safety assessment

FSANZ has assessed the safety of this immobilised fructosyltransferase from *A. oryzae* and its proposed use as a processing aid (see Supporting Document).

FSANZ concluded there are no safety concerns from the use of this enzyme, with similar enzymes from other sources having a long history of safe use in food. The production organism is neither pathogenic nor toxigenic.

2.4 Risk management

Following assessment, FSANZ prepared a draft variation and called for submissions on that draft variation between 7 November and 5 December 2024.

The risk management options available to FSANZ following the call for submissions were to:

- approve the draft variation proposed following assessment, or
- approve that draft variation subject to such amendments as FSANZ considers necessary, or
- reject that draft variation.

Having regard to the submission received, and for the reasons set out in this report, FSANZ approved the draft variation proposed at the call for submissions with a minor amendment to correct a formatting error (see Attachment A).

The conclusions from the risk and technical assessment were that the proposed use of the enzyme is technologically justified and there are no safety concerns associated with its proposed use.

The permission to use this immobilised fructosyltransferase is subject to the condition that the maximum permitted level or amount of the enzyme that may be present in food must be consistent with GMP.

Risk management considerations for this application relating to the regulatory approval, the enzyme and source microorganism nomenclature, specifications and labelling are discussed below.

2.4.1 Regulatory approval for processing aids

As stated above, FSANZ approved the amended draft variation to permit the proposed use of immobilised fructosyltransferase (E.C 2.4.1.9) in the manufacture of sc-FOS from sucrose.

2.4.2 Enzyme nomenclature, source microorganism nomenclature and specifications

2.4.2.1 *Enzyme and microorganisms*

The International Union of Biochemistry and Molecular Biology (IUBMB) uses the accepted name inulosucrase for EC 2.4.1.9. Fructosyltransferase is an accepted alternative name, and is the name proposed by the applicant. The enzyme is produced in immobilised form and was assessed by FSANZ on this basis. Therefore, Fructosyltransferase, immobilised, (EC 2.4.1.9) is the name used in the approved draft variation.

Nomenclature for the production organism is in accordance with accepted international norms for fungal taxonomy.

2.4.2.2 *Specifications*

There are relevant identity and purity specifications in primary sources of specifications listed in Schedule 3 for enzyme preparations used in food processing (see section 1.3.2 above), with which this enzyme would have to comply when added to food in accordance with the Code or sold for use in food.

2.4.3 Labelling

The labelling provisions in the Code will apply to foods for sale that are manufactured using this processing aid (see Section 1.3.3 above).

2.4.4 Risk management conclusion

The risk management conclusion is to permit the enzyme, an immobilised fructosyltransferase (EC 2.4.1.9) sourced from *A. oryzae* for use as a processing aid in the manufacture of sc-FOS from sucrose.

The enzyme and its associated technological purpose will be listed in the table to subsection S18—9(3) of the Code, which includes enzymes permitted for a specific technological purpose. The technological purpose of the enzyme will be the manufacture of sc-FOS from sucrose.

The maximum permitted level or amount of the enzyme that may be present in the food will be an amount consistent with GMP.

1.1 Risk communication

2.4.5 Consultation

Consultation is a key part of FSANZ's standards development process. FSANZ developed and applied a standard communication strategy to this application. All calls for submissions are notified via the Food Standards Notification Circular, media release, FSANZ's social media channels and Food Standards News.

The process by which FSANZ considers standards development matters is open, accountable, consultative and transparent. Public submissions were called to assist consideration of the draft variation to the Code. FSANZ acknowledges the time taken by individuals and organisations to make submissions on this application.

The draft variation was considered for approval by the FSANZ Board having regard to the submission made during the call for submissions period.

2.5 FSANZ Act assessment requirements

When assessing this application and the subsequent development of a food regulatory measure, FSANZ had regard to the following matters in section 29 of the FSANZ Act:

2.5.1 Section 29

2.5.1.1 Consideration of costs and benefits

Changes have been made to the Impact Analysis requirements by the Office of Impact Analysis (OIA)². Impact analysis is no longer required to be finalised with the OIA. Prior to these changes, the OIA advised FSANZ that a Regulatory Impact Statement (RIS) was not needed for the applications relating to processing aids (OIA23-06225). This is because applications relating to permitting the use of processing aids that have been determined to be safe are minor and deregulatory in nature, as their use will be voluntary if the draft variation concerned is approved. Under this approach, FSANZ's assessment was that a RIS is not needed for this application.

FSANZ, however, considered the costs and benefits that may arise from the proposed measure for the purposes of meeting FSANZ Act considerations. The FSANZ Act requires FSANZ to have regard to whether costs that would arise from the proposed measure outweigh the direct and indirect benefits to the community, government or industry that would arise from the proposed measure (paragraph 29(2)(a)).

The purpose of this consideration was to decide if the community, government and industry is likely to benefit, on balance, from a move from the *status quo* (where the status quo is rejecting the application). This analysis considered permitting the proposed use of this immobilised fructosyltransferase (EC 2.4.1.9) sourced from *A. oryzae* for use as a processing aid during the manufacture of sc-FOS from sucrose.

The consideration of the costs and benefits in this section was not intended to be an exhaustive, quantitative economic analysis of the proposed measure. In fact, most of the

² [Regulatory Impact Analysis Guide for Ministers' Meetings and National Standard Setting Bodies | The Office of Impact Analysis \(pmc.gov.au\)](https://www.pmc.gov.au/regulatory-impact-analysis-guide-for-ministers-meetings-and-national-standard-setting-bodies)

effects considered cannot easily be assigned a dollar value.

Rather, the assessment seeks to highlight the likely positives and negatives of moving away from the status quo by approving the proposed variation to the Code.

FSANZ's conclusions regarding the costs and benefits of the proposed measure are set out below. No further information was received during the consultation process that changed that assessment.

Costs and benefits of permitting the proposed use of this enzyme

Industry may benefit from several improvements and efficiencies from the use of this processing aid during the manufacture of sc-FOS from sucrose.

Due to the voluntary nature of the permission, industry will only use the enzyme as proposed where they believe a net benefit exists for them.

If industry were to experience cost savings because of using this enzyme, industry may pass on some of the cost savings to consumers.

Permitting the proposed use of this enzyme may result in a small, inconsequential cost to government in terms of an addition to the current range of processing aids that are already monitored for compliance.

Conclusions from cost benefit considerations

FSANZ's assessment at the call for submissions was that the direct and indirect benefits that would arise from permitting the proposed use of this immobilised fructosyltransferase sourced from *A. oryzae* for use as a processing aid in during the manufacture of sc-FOS from sucrose is likely to outweigh the associated costs. No further information was received during the consultation process that changed that assessment.

2.5.1.2 Other measures

There are no other measures (whether available to FSANZ or not) that would be more cost-effective than a food regulatory measure developed or varied because of the application.

2.5.1.3 Any relevant New Zealand standards

There are no relevant New Zealand only standards. The standards in the Code which are relevant to the permitted use of the enzyme processing aid in question apply in both Australia and New Zealand.

2.5.1.4 Any other relevant matters

Other relevant matters are considered below.

2.5.2 Subsection 18(1)

FSANZ has also considered the three objectives in subsection 18(1) of the FSANZ Act during the assessment.

2.5.2.1 Protection of public health and safety

FSANZ undertook a safety assessment (see SD) and concluded there are no public health and safety concerns associated with permitting the proposed use of this enzyme as a processing aid.

2.6.2.2 The provision of adequate information relating to food to enable consumers to make informed choices

Existing labelling requirements will apply to this immobilised fructosyltransferase in accordance with the Code to enable consumers to make informed choices (see sections 1.3.3 and 2.4.3).

2.6.2.3 The prevention of misleading or deceptive conduct

No issues were identified for this application relevant to this objective.

2.5.3 Subsection 18(2) considerations

FSANZ has also had regard to:

- **the need for standards to be based on risk analysis using the best available scientific evidence**

FSANZ has used the best available scientific evidence to conduct the risk analysis. The risk assessment is provided in the SD. The applicant submitted a dossier of scientific studies as part of the application.

This dossier, together with other technical information including scientific literature, was considered by FSANZ in assessing the application.

- **the promotion of consistency between domestic and international food standards**

In terms of food safety, the relevant international standard setting body is the Codex Alimentarius Commission (Codex). In contrast to food additives, there is no Codex 'general standard' for enzymes. However, there are relevant international specifications for enzyme preparations as referred to in section 1.3.2 of this report, with which this enzyme would have to comply when added to food in accordance with the Code or sold for use in food.

Also, as noted in section 1.4 above, there is a Codex guideline, *Guidelines on Substances used as Processing Aids* (CAC/GL 75-2010) which sets out general principles for the safe use of substances used as processing aids, including that substances used as processing aids shall be used under conditions of GMP.

- **the desirability of an efficient and internationally competitive food industry**

Fructosyltransferase is used as a processing aid in a range of countries where there are no restrictions on the use of enzyme processing aids or where the enzyme is covered by a country positive list or specific approval.

Approval for a wider variety of sources of this enzyme would bring Australia and New Zealand into line with other jurisdictions. In this way, Australia and New Zealand will remain competitive with other international markets. This will also help foster continued innovation and improvements in food manufacturing techniques and processes.

The conclusion of the risk assessment is that there are no public health and safety concerns associated with the proposed use of this enzyme as a food processing aid. It is therefore appropriate that Australian and New Zealand food industries are given the opportunity to benefit from the use of this enzyme for production of sc-FOS from sucrose.

The domestic food industry will make their own economic decisions, considering the costs and benefits of using the new enzyme, to determine if it is of benefit to their business.

- **the promotion of fair trading in food**

No issues were identified for this application relevant to this objective.

- **any written policy guidelines formulated by the Food Ministers' Meeting**

The Ministerial Policy Guideline *Addition to Food of Substances other than Vitamins and Minerals*³ includes specific order policy principles for substances added to achieve a solely technological function, such as processing aids. These specific order policy principles state

³ Available on the [Food regulation website](#).

that permission should be granted where:

- the purpose for adding the substance can be articulated clearly by the manufacturer as achieving a solely technological function (i.e. the 'stated purpose')
- the addition of the substance to food is safe for human consumption
- the amounts added are consistent with achieving the technological function
- the substance is added in a quantity and a form which is consistent with delivering the stated purpose
- no nutrition, health or related claims are to be made regarding the substance.

FSANZ determined that permitting the proposed use of this enzyme as a processing aid is consistent with the specific order policy principles for 'technological function.' All other relevant requirements of the policy guideline are similarly met.

Food Standards (Application A1299 – Fructosyltransferase from *Aspergillus oryzae* as a processing aid) Variation

The Board of Food Standards Australia New Zealand gives notice of the making of this variation under section 92 of the *Food Standards Australia New Zealand Act 1991*. The variation commences on the date specified in clause 3 of this variation.

Dated [To be completed by the Delegate]

[Name and position of Delegate]

Delegate of the Board of Food Standards Australia New Zealand

Note:

This variation will be published in the Commonwealth of Australia Gazette No. FSC XX on XX Month 20XX. This means that this date is the gazettal date for the purposes of clause 3 of the variation.

1 Name

This instrument is the *Food Standards (Application A1299 – Fructosyltransferase from Aspergillus oryzae as a processing aid) Variation*.

2 Variation to a Standard in the *Australia New Zealand Food Standards Code*

The Schedule varies a Standard in the *Australia New Zealand Food Standards Code*.

3 Commencement

The variation commences on the date of gazettal.

Schedule

Schedule 18—Processing aids

[1] Subsection S18—9(3) (table)

Insert:

Fructosyltransferase, immobilised, (EC 2.4.1.9) derived from *Aspergillus oryzae*

For use in the manufacture of short-chain fructooligosaccharides from sucrose

GMP

Attachment B – Explanatory Statement

EXPLANATORY STATEMENT

Food Standards Australia New Zealand Act 1991

Food Standards (Application A1299 – Fructosyltransferase from *Aspergillus oryzae* as a processing aid) Variation

1. Authority

Section 13 of the *Food Standards Australia New Zealand Act 1991* (the FSANZ Act) provides that the functions of Food Standards Australia New Zealand (the Authority) include the development of standards and variations of standards for inclusion in the *Australia New Zealand Food Standards Code* (the Code).

Division 1 of Part 3 of the FSANZ Act specifies that the Authority may accept applications for the development or variation of food regulatory measures, including standards. This Division also stipulates the procedure for considering an application for the development or variation of food regulatory measures.

The Authority accepted Application A1299 which sought to amend the Code to permit the use of the enzyme, immobilised fructosyltransferase from *Aspergillus oryzae*, as a processing aid in the production of short-chain fructooligosaccharides from sucrose. The Authority considered the application in accordance with Division 1 of Part 3 and has approved a draft variation: the *Food Standards (Application A1299 – Fructosyltransferase from *Aspergillus oryzae* as a processing aid) Variation* (the approved draft variation).

Following consideration by the Food Ministers' Meeting (FMM), section 92 of the FSANZ Act stipulates that the Authority must publish a notice about the draft variation.

2. Variation is a legislative instrument

The approved draft variation is a legislative instrument for the purposes of the *Legislation Act 2003* (see section 94 of the FSANZ Act) and is publicly available on the Federal Register of Legislation (www.legislation.gov.au).

This instrument is not subject to the disallowance or sunset provisions of the *Legislation Act 2003*. Subsections 44(1) and 54(1) of that Act provide that a legislative instrument is not disallowable or subject to sunset if the enabling legislation for the instrument (in this case, the FSANZ Act): (a) facilitates the establishment or operation of an intergovernmental scheme involving the Commonwealth and one or more States; and (b) authorises the instrument to be made for the purposes of the scheme. Regulation 11 of the *Legislation (Exemptions and other Matters) Regulation 2015* also exempts from sunset legislative instruments a primary purpose of which is to give effect to an international obligation of Australia.

The FSANZ Act gives effect to an intergovernmental agreement (the Food Regulation Agreement) and facilitates the establishment or operation of an intergovernmental scheme (national uniform food regulation). That Act also gives effect to Australia's obligations under an international agreement between Australia and New Zealand. For these purposes, the Act establishes the Authority to develop food standards for consideration and endorsement by the FMM. The FMM is established under the Food Regulation Agreement and the international agreement between Australia and New Zealand, and consists of New Zealand, Commonwealth and State/Territory members. If endorsed by the FMM, the food standards on gazettal and registration are incorporated into and become part of Commonwealth, State and Territory and New Zealand food laws.

These standards or instruments are then administered, applied, and enforced by these jurisdictions' regulators as part of those food laws.

3. Purpose

The Authority has approved a draft variation to amend the table to subsection S18—9(3) of the Code to permit the use of an immobilised fructosyltransferase (EC 2.4.1.9) from a non-genetically engineered strain of *Aspergillus oryzae* in the manufacture of short-chain fructooligosaccharides from sucrose.

This permission is subject to the condition that the maximum permitted level or amount of the enzyme that may be present in the food must be consistent with good manufacturing practice (GMP).

4. Documents incorporated by reference

The approved draft variation does not incorporate any documents by reference.

However, existing provisions of the Code incorporate documents by reference that would prescribe identity and purity specifications for the processing aid to be permitted by the approved draft variation. Section 1.1.1—15 of the Code requires substances used as processing aids to comply with any relevant identity and purity specifications listed in Schedule 3 of the Code when added to food in accordance with the Code or sold for use in food. Section S3—2 of Schedule 3 incorporates by reference the specifications listed in the Joint FAO/WHO Expert Committee on Food Additives (JECFA) Compendium of Food Additive Specifications (FAO/WHO 2021) and the United States Pharmacopeial Convention (2022) Food Chemicals Codex (13th edition). These include general specifications for the identity and purity parameters of enzyme preparations used in food processing.

5. Consultation

In accordance with the procedure in Division 1 of Part 3 of the FSANZ Act, the Authority's consideration of Application A1299 included one round of public consultation following an assessment, and the preparation of a draft variation to the Code and associated assessment summary. FSANZ called for submissions on the draft variation between 7 November and 5 December 2024. Further details of the consultation process, the issues raised during consultation and by whom, and the Authority's response to these issues are available in an approval report published on the Authority's website at www.foodstandards.gov.au.

Changes have been made to the Impact Analysis requirements by the Office of Impact Analysis (OIA)⁴. Impact analysis is no longer required to be finalised with the OIA. Prior to these changes, the OIA advised FSANZ that a Regulatory Impact Statement (RIS) was not needed for applications relating to processing aids. This is because applications relating to permitting the use of processing aids that have been determined to be safe are minor and deregulatory in nature, as their use will be voluntary if the draft variation concerned is approved.

Under this approach, FSANZ's assessment is that a RIS is not needed for this application.

6. Statement of compatibility with human rights

This instrument is exempt from the requirements for a statement of compatibility with human rights as it is a non-disallowable instrument under section 44 of the *Legislation Act 2003*.

⁴ Regulatory Impact Analysis Guide for Ministers' Meetings and National Standard Setting Bodies | The Office of Impact Analysis (pmc.gov.au)

7. Variation

References to 'the variation' in this section are references to the approved draft variation.

Clause 1 of the variation provides that the name of the variation is the *Food Standards (Application A1299 – Fructosyltransferase from Aspergillus oryzae as a processing aid) Variation*.

Clause 2 of the variation provides that the Code is amended by the Schedule to the variation.

Clause 3 of the variation provides that the variation commences on the date of gazettal of the instrument.

Schedule to the variation

Item [1] of the Schedule to the variation inserts a new entry, in alphabetical order, into column 1 of the table to subsection S18—9(3) of the Code.

The new entry consists of the following enzyme:

'Fructosyltransferase, immobilised, (EC 2.4.1.9) derived from *Aspergillus oryzae*'.

The permitted technological purpose for this enzyme is prescribed in column 2 of the table. i.e. 'For use in the manufacture of short-chain fructooligosaccharides from sucrose.'

The permission is subject to the condition, as prescribed in column 3 of the table, that the maximum permitted level or amount of this enzyme that may be present in the food must be consistent with GMP.

The effect of **item [1]** is to permit the use of the enzyme immobilised fructosyltransferase (EC 2.4.1.9) from *Aspergillus oryzae* as a processing aid in accordance with the Code.

Attachment C – Draft variation at Call for Submissions

Food Standards (Application A1299 – Fructosyltransferase from *Aspergillus oryzae* as a processing aid) Variation

The Board of Food Standards Australia New Zealand gives notice of the making of this variation under section 92 of the *Food Standards Australia New Zealand Act 1991*. The variation commences on the date specified in clause 3 of this variation.

Dated [To be completed by the Delegate]

[Insert name and position of Delegate]

Delegate of the Board of Food Standards Australia New Zealand

Note:

This variation will be published in the Commonwealth of Australia Gazette No. FSC XX on XX Month 20XX. This means that this date is the gazettal date for the purposes of clause 3 of the variation.

1 Name

This instrument is the *Food Standards (Application A1299 – Fructosyltransferase from Aspergillus oryzae as a processing aid) Variation*.
