SCHEDULE

Schedule 22 — Foods and classes of foods

[1] Section S22—2

Repeal the section, substitute:

S22—2 Foods and classes of foods

(1) Section S22—4 describes the foods that are classed as animal food commodities.

(2) Section S22—5 describes the foods that are classed as crop commodities.

(3) Section S22—6 describes the foods that are classed as derived edible commodities of plant origin.

(4) Section S22—7 describes the foods that are classed as secondary commodities of plant origin.

(5) Section S22—8 describes the foods that are classed as secondary commodities of animal origin.

S22—3 Portion of a commodity to which an MRL and an ERL apply

(1) Subject to subsection (2), the portion of a food commodity that is specified for the purposes of paragraph 1.4.2—3(2)(a) is the portion as specified by a provision of this Standard.

(2) If Schedules 19, 20 or 21 specify a portion of a food commodity for purposes of paragraph 1.4.2—3(2)(a), that portion is the portion specified for the purposes of that paragraph.

Note Paragraph 1.4.2—3(2)(a) provides that, when calculating the amount of a permitted residue in a food, the amount to calculate is the amount of that residue that is in the portion of the commodity that is specified in Schedule 22.

Example Bananas are classified by Schedule 22 as *Assorted tropical and sub-tropical fruits - inedible pee*l. Subsection S22—5(5) and (8) provide that, for bananas, the portion specified for the purposes of paragraph 1.4.2—3(2)(a) is 'the whole commodity after removal of any central stem and peduncle'. Schedule 20 may set an MRL for 'Bananas [Pulp]'. In this case, subsection S22—3(2). would provide that the portion specified for the purposes of paragraph 1.4.2—3(2)(a) is the pulp.

S22—4 Animal Food Commodities

Mammalian products

Meat (mammalian)

Meats are the muscular tissues, including adhering fatty tissues such as intramuscular, intermuscular and subcutaneous fat from animal carcasses or cuts of these as prepared for wholesale or retail distribution. Meat (mammalian) includes farmed and game meat. The cuts offered may include bones, connective tissues and tendons as well as nerves and lymph nodes. It does not include edible offal. The entire commodity except bones may be consumed.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity (without bones). When the commodity description is qualified by (in the fat) a proportion of adhering fat is analysed and the MRLs apply to the fat.

Edible offal (mammalian)

Edible offal is the edible tissues and organs other than muscles and animal fat from slaughtered animals as prepared for wholesale or retail distribution. Edible offal includes brain, heart, kidney, liver, pancreas, spleen, thymus, tongue and tripe. The entire commodity may be consumed.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity.

Fats (mammalian)

Mammalian fats, excluding milk fats are derived from the fatty tissues of animals (not processed). The entire commodity may be consumed.

Commodities: Buffalo fat; Camel fat; Cattle fat; Goat fat; Horse fat; Pig fat; Rabbit fat; Sheep fat.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity.

Milks

Milks are the mammary secretions of various species of lactating herbivorous ruminant animals.

Commodities: Buffalo milk; Camel milk; Cattle milk; Goat milk; Sheep milk. The entire commodity may be consumed.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity. When an *MRL for cattle milk or milks is qualified by '(in the fat)' the compound is regarded as fat-soluble, and the MRL and *ERL apply to the fat portion of the milk. In the case of a derived or a manufactured milk product with a fat content of 2% or more, the MRL also applies to the fat portion. For a milk product with fat content less than 2%, the MRL applied should be 1/50 that specified for 'milk (in the fat)', and should apply to the whole product.

Poultry

Poultry meat

Poultry meats are the muscular tissues, including adhering fat and skin, from poultry carcasses as prepared for wholesale or retail distribution. The entire product may be consumed. Poultry meat includes farmed and game poultry.

Fish, crustaceans and molluscs

Fish includes freshwater fish, diadromous fish and marine fish.

Diadromous fish

Diadromous fish include species which migrate from the sea to brackish and/or fresh water and in the opposite direction. Some species are domesticated and do not migrate. The fleshy parts of the animals and, to a lesser extent, roe and milt are consumed.

S22—6 Derived edible commodities of plant origin

Derived edible commodities of plant origin

'Derived edible products' are foods or edible substances isolated from primary food commodities or raw agricultural commodities using physical, biological or chemical processing. This includes groups such as vegetable oils (crude and refined), by-products of the fractionation of cereals and teas (fermented and dried).

Cereal grain milling fractions

This group includes milling fractions of cereal grains at the final stage of milling and preparation in the fractions, and includes processed brans.

S22—7 Secondary commodities of plant origin

Secondary commodities of plant origin

The term ‘Secondary food commodity’ refers to a primary food commodity which has undergone simple processing, such as removal of certain portions, drying (except natural drying), husking, and comminution, which do not basically alter the composition or identity of the product. For the commodities referred to in dried fruits, dried vegetables and dried herbs refer to the commodity groupings for fruits, vegetables and herbs. Naturally field dried mature crops such as pulses or cereal grains are not considered as secondary food commodities.

Dried fruits

Dried fruits are generally artificially dried. Exposure to pesticides may arise from pre-harvest application, post-harvest treatment of the fruits before processing, or treatment of the dried fruit to avoid losses during transport and distribution.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity after removal of stones, but the residue is calculated on the whole commodity.

Dried herbs

Dried herbs are generally artificially dried and often comminuted. Exposure to pesticides is from pre-harvest applications and/or treatment of the dry commodities.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity.

Dried vegetables

Dried vegetables are generally artificially dried and often comminuted. Exposure to pesticides is from pre-harvest application and/or treatment of the dry commodities.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity.

Milled cereal products (early milling stages)

The group ‘milled cereal products (early milling stages)’ includes the early milling fractions of cereal grains, except buckwheat, such as husked rice, polished rice and the unprocessed cereal grain brans. Exposure to pesticides is through pre-harvest treatments of the growing cereal grain crop and especially through post-harvest treatment of cereal grains.

Commodities: Bran, unprocessed; Rice bran, unprocessed; Rice, husked; Rice, polished; Rye bran, unprocessed; Wheat bran, unprocessed.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity.

S22—8 Secondary commodities of animal origin

Secondary commodities of animal origin

The term ‘secondary food commodity’ refers to a primary food commodity which has undergone simple processing, such as removal of certain portions, drying, and comminution, which do not basically alter the composition or identity of the commodity.

Animal fats, processed

This group includes rendered or extracted (possibly refined and/or clarified) fats from mammals and poultry and fats and oils derived from fish.

Commodities: Tallow and lard from cattle, goats, pigs and sheep; Poultry fats, processed.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity.

Dried meat and fish products

For the commodities referred to in dried meat and dried fish products refer to the commodity groupings for meat and fish. Dried meat and fish products includes naturally or artificially dried meat products and dried fish, mainly marine fish.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity.

Milk fats

Milk fats are the fatty ingredients derived from the milk of various mammals.

Portion of the commodity to which the MRL and ERL apply (and which is analysed): whole commodity.
