

Comments by the Departments of Environment & Primary Industries and Health, Victoria

Due date of submission - 23 August 2013

The Victorian Departments of Environment & Primary Industries and Health welcome the opportunity to provide comments on Proposal M1009 – Maximum Residue Limits.

We note that FSANZ is committed to ensuring that the implications of MRL variations are considered. The availability of a range of agricultural and veterinary chemicals is vital to Victoria's primary producers, who use these products to control pests to produce commodities of premium yield and quality for supply to export and domestic markets.

This is a routine proposal to reflect APVMA agricultural and veterinary chemical use variations in the Australia New Zealand Food Standards Code and to address the MRL requests of international trading partners. From our perspective, the proposed MRLs do not present any public health or safety concerns, based on the dietary exposure estimates provided by FSANZ.

On this basis, the departments support the proposal.
